

Artificial Intelligence is on its way to be used every day to make sure that you don't end up having to learn how to use a computer .

The goal is to make that easier for the computer to understand.

In this article, we'll look at the neural networks that are part of the artificial intelligence system.

The Neural Networks

The neural networks are the computers that make up the network.

They are the computers that make up the network.

Artificial Intelligence is transforming many industries by enabling machines to perform tasks that normally require human intelligence. It is widely used in healthcare, education, manufacturing, finance, transportation, and cybersecurity. AI systems can analyze large amounts of data, identify patterns, make predictions, and support intelligent decision-making.

Answer: new content such as text, images, audio, video, and computer programs
Confidence Score: 0.267
```

Chatbot: Hello! Type 'exit' to end the conversation.

You: Hello

Chatbot: I'm back!

You: What is Gen AI?

Chatbot: I'm back!

You: Who created you?

Chatbot: I'm back!

You: exit

Chatbot: Goodbye! Have a nice day.

RETRIEVAL-AUGMENTED GENERATION (RAG)

=====

Enter your question (or type 'exit'): python -m pip install sentence-transformersWhat is RAG

Retrieved Documents

Document 1

Large Language Models are transformer-based models trained on massive text datasets. They are used for text generation, summarization, translation, question answering and conversational AI.

Similarity Score : 0.2988

Document 2

Retrieval-Augmented Generation combines information retrieval with text generation. It retrieves relevant documents from an external knowledge base and gives them to a language model as context.

Similarity Score : 0.1724
